

ORATOR

An adaptive communication-training agent

Practice. Diagnose. Retry. Measure. Adapt.

Live demo: learnwithorator.vercel.app

Source: github.com/singharyan44/orator

PROBLEM

Generic speaking tips don't change behavior

- "Be confident" is not training — nothing is practiced, measured, or retried.
- Existing tools rate you once; none coach you through repeated attempts.
- Interview pipelines leak strong candidates over weak delivery.

SOLUTION

The training loop

Challenge → Speak → Observe → Diagnose → Coach → Retry → Measure → Adapt

- One TrainingEngine drives three coaches: Speech, Debate, Interview.
- Every attempt ends with one retry focus; the next drill targets your weakest skill.

What you will see (hands-free, no mic needed)

1. Sample attempt → feedback with measured metrics (pace, fillers, pauses).
2. Retry → side-by-side comparison: what improved, what to fix next.
3. Assigned drill: the system names YOUR weakest metric and prescribes it.
4. Debate: opponent attacks your argument's weakest point → diagnosis.
5. Profile update: strengths, recurring weaknesses, trends that compound.

AssemblyAI-forward, honest by design

- Universal-3.5 Pro Streaming (16 kHz PCM16) with temp-token auth and clean lifecycle.
- Turn + end-of-turn semantics; word timings drive real pause detection.
- LLM reasoning (Groq / OpenRouter) for coaching; deterministic engines for numbers.
- Truthful fallback badges: AI Coach, Rules Coach — never a fake AI answer.

Not a rater, not a sparring chatbot

- The product is the adaptive loop: weakest-skill assignment, not random drills.
- Debate opponent attacks YOUR specific weak point, then scores the repair.
- Personal profile compounds across sessions — the more you train, the smarter it gets.
- On-device vision (MediaPipe, GPU-first) adds gaze/eye signals; nothing leaves the browser.

Who pays and why we keep them

- Learners (freemium) → coaches & bootcamps (seat licenses) → HR screening at scale.
- Moat: per-user training profile + adaptive curriculum data, not the feedback text.
- Paid tiers: AI coaching depth, unlimited modes, team dashboards, API access.

Where this goes next

- More scenarios: negotiation, teaching, leadership.
- Full video-aware coaching (spiked: on-device landmarks already live).
- Team and coach dashboards; mobile app.
- API access for HR and ed-tech integrations.

ASK

Try it live — no mic needed
